DAYSYS® reflectors - the easiest way to save energy and money

You can use our DAYSYS® reflectors with or without prismatic diffusors or louvres !

Whether you're looking to save money or increase light, you'll find that energy-save reflectors can also be easily installed in shops, factories, warehouses and offices. Both with and without prismatic diffusers or louvres.

Are there other benefits too ?

Of course. For instance, fitting energy-save reflectors means less tube replacement and an improved power factor. And by reducing your lighting load, you'll find it also gives you spare electrical capacity.

**We can promise, your savings will be greater than your
outlay. Amortisation in 0,5 - 1,5 years.**
(depending upon burning duration of the lamps)

What are DAYSYS® reflectors ?

DAYSYS® reflectors are a German product made from the highest quality materials. They have been designed to keep their reflective qualities with the minimum of maintenance and absolutley industriale suited. In fact, all that is needed, is a simple wipe over with a clean dry duster whenever you change the tube.

We may help you to identify other areas where you could be saving even more money and energy.

DAYSYS® - Reflectors - technical specifications

The surface of the reflectors is chemically polished and anodised to produce a high grade and permanent mirror finish.

Each reflector is manufactured to a parabolic design on a CNC press.

This gives the reflector the optimum design to make the most efficient use of light on the working plane.

available lengths : 18W(60 cm) - 36W(1,2 m) - 58W(1,5 m)

Special lengths on request.

Special productions are developed without extra costs !

Version Daywing - asymmetric

Cost-saving with DAYSYS® - Reflectors

Just remove one of the tubes from your existing twin tube fluorescent light fitting.

Then fit a **DAYSYS®** - Reflector to retain the same level of light.

In areas where you require more light, **DAYSYS®** - reflectors can also increase your lighting level by up to 100%, without increasing running costs.

Simply fit them to your light fittings without removing a tube and with one step you can effectively double your lighting level.

Simply and effectively
